**MEMORANDUM FOR THE RECORD**

**SUBJECT: Continuous Ignition**

1. The Continuous Ignition modification originally referred to as an "High Altitude Restart Capability" consists of two separate modifications; one for the airframe and another for the engine. Basically, the modification consists of a spark plug that operates continually. This aids in reducing the possibility of a flameout, but is of little help in restarting the engine at altitude when a complete flameout has occurred. When the engine has actually flamed out, the aircraft must return to a lower altitude (approximately [ ] feet) to relight the engine.

25X1D

2. Presently, all airframe modifications are complete. Parts kit list to modify the engines are now being forwarded to our Project Depot [ ] to start requisitioning action. Kits, when available, will be installed on each engine as they pass through the overhaul line at Pratt and Whitney.
